MAT 219 Introduction to Differential Equations - Fall 2013

Prerequisites: MAT 120 Credit/ECTS: (4-0) 4

Course website: http://math.ncc.metu.edu.tr/math219

<u>Catalog description:</u> First order equations and various applications. Higher order linear differential equations. Power series solutions. The Laplace transform. Solutions of initial value problems. Systems of linear differential equations. Introduction to partial differential equations.

Course Objectives: By the end of this course, a student will

- classify and identify different types of differential equations,
- explicitly solve several important classes of ordinary differential equations and interpret their qualitative behavior.
- apply ideas from linear algebra in order to solve single linear ordinary differential equations and
- systems of such equations,
- model certain physical phenomena using differential equations and reinterpret their solutions physically,
- apply the Laplace transform for solving differential equations,
- use the method of separation of variables in order to solve some basic partial differential equations.

Course Coordinator and Instructors:

Instructors	Section(s)	Office	Phone	E-mail
Anar Dosi	1	SZ-33	2943	dosiev@metu.edu.tr
Benjamin Walter (coordinator)		SZ-132	2960	benjamin@metu.edu.tr

Exams and Grading:

Two Midterm Exams : 30 % eachFinal : 40 %

<u>Textbook:</u> "Elementary Differential Equations and Boundary Value Problems", Boyce, W. E., DiPrima, R. C., 9th ed., (available at the bookstore)

<u>Suggested Problems</u>: A list of suggested problems is announced on the course website. Students are encouraged to attempt to solve all of these problems in a timely manner, and ask the instructors about the ones that they cannot solve. At least 25% of the exam problems will be chosen among these problems.

NA Policy: If you miss all midterm exams and final exam, you will receive a grade of NA for the course.

<u>Make-up Policy:</u> In order to be eligible to enter a make-up examination for a missed examination, a student should have a documented or verifiable, and officially acceptable excuse. A student cannot get make-up examinations for two missed exams. The make-up examination for all exams will be after the final exam, and will include all topics.

<u>Mathematics Help Room:</u> Office hours will be held in the <u>Mathematics Help Room</u> (T-103). The timetable can be found at the course website. Students are encouraged to visit the help room both at the office hours of their own instructors, and others. The room can also be used for studying and for working in groups.

COURSE SCHEDULE

June 30-July 4	1	Introduction, Directional Fields Chapter 2. First Order Differential Equations §2.2: Separable equations (also homogeneous equations - see p49 #30).
	2	§2.1: Linear equations; Method of integrating factors.§2.3: Modeling with first order equations (tank problems, temperature problems).
	3	§2.4: Differences between linear and nonlinear equations (existence and uniqueness theorems).
	4	§2.6: Exact equations and integrating factors.
Week 2: July 7-11	5	Chapter 7. Systems of First Order Linear Equations §7.1: Introduction.

Section			§7.2: Review of matrices.			
Exam I, July 9, 17:40 8 \$7.5: Homogeneous linear systems with constant coefficients. \$7.6: Complex eigenvalues. \$7.6: Complex eigenvalues. \$7.8: Repeated eigenvalues. \$7.9: Nonhomogeneous linear systems (variation of parameters only). Week 3: July 14-18 10 \$7.7: Fundamental matrices. \$7.9: Nonhomogeneous linear systems (variation of parameters only). 11 Chapter 4. Higher Order Linear Equations \$4.1: General theory of n ⁰ order linear equations. 12 \$4.2: Homogeneous equations with constant coefficients. Chapter 3. Second Order Linear Equations \$3.2: Fundamental solutions of linear homogeneous equations. 3.3: Linear independence and the Wronskian. \$3.4: Complex roots of the characteristic equation. 15 \$3.5: Repeated roots; Reduction of order. Week 4: July 21-25 16 \$3.6: Nonhomogeneous equations; Method of undetermined coefficients. 17 \$4.3: The method of undetermined coefficients. 18 \$3.7: Variation of parameters. 19 \$3.8: Mechanical and electrical vibrations. 20 \$3.9: Forced Vibrations. Chapter 6. The Laplace Transform \$6.1: Definition of the Laplace transform. \$6.2: Solution of initial value problems. \$6.3: Step functions. 24 \$6.2: Solution of initial value problems. \$6.3: Step functions. \$6.5: Impulse functions. \$6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series \$10.4: Derivation of the Heat Conduction Equation. \$10.4: Two-point boundary value problems. \$10.4: Two-point boundary value problems. \$10.4: Even and odd functions.		6				
Section of the content of the cont	,	7				
S7.8: Repeated eigenvalues. \$7.9: Nonhomogeneous linear systems (variation of parameters only).		8				
Week 3: July 14-18 11 Chapter 4. Higher Order Linear Equations \$4.1: General theory of n th order linear equations. 12 \$4.2: Homogeneous equations with constant coefficients. Chapter 3. Second Order Linear Equations \$3.2: Fundamental solutions of linear homogeneous equations. 14 \$3.3: Linear independence and the Wronskian. \$3.4: Complex roots of the characteristic equation. 15 \$3.5: Repeated roots; Reduction of order. 16 \$3.6: Nonhomogeneous equations with constant coefficients. 17 \$4.3: The method of undetermined coefficients. 18 \$3.7: Variation of parameters. 18 \$3.7: Variation of parameters. 19 \$3.8: Mechanical and electrical vibrations. 20 \$3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform \$6.1: Definition of the Laplace transform. \$6.2: Solution of initial value problems. \$6.3: Step functions. 24 \$6.2: Solution of initial value problems. \$6.3: Step functions. \$6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series \$10.A: Derivation of the Heat Conduction Equation. \$10.1: Two-point boundary value problems. \$10.4: Even and odd functions.		9	§7.7: Fundamental matrices.			
July 14-18 11 S4.1: General theory of n order linear equations. 12 \$4.2: Homogeneous equations with constant coefficients. 13 Chapter 3. Second Order Linear Equations \$3.2: Fundamental solutions of linear homogeneous equations. 14 \$3.3: Linear independence and the Wronskian. \$3.4: Complex roots of the characteristic equation. 15 \$3.5: Repeated roots; Reduction of order. 16 \$3.6: Nonhomogeneous equations; Method of undetermined coefficients. 17 \$4.3: The method of undetermined coefficients. 18 \$3.7: Variation of parameters. 19 \$3.8: Mechanical and electrical vibrations. 20 \$3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform \$6.1: Definition of the Laplace transform. \$6.2: Solution of initial value problems. \$6.3: Step functions. 22 \$6.4: Differential equations with discontinuous forcing functions. 23 \$6.4: Differential equations with discontinuous forcing functions. 24 \$6.5: Impulse functions. \$6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series \$10.4: Derivation of the Heat Conduction Equation. \$10.4: Even and odd functions.		10				
Chapter 3. Second Order Linear Equations §3.2: Fundamental solutions of linear homogeneous equations. \$3.2: Fundamental solutions of linear homogeneous equations. \$3.3: Linear independence and the Wronskian. §3.4: Complex roots of the characteristic equation. 15 §3.5: Repeated roots; Reduction of order. 16 §3.6: Nonhomogeneous equations; Method of undetermined coefficients. 17 §4.3: The method of undetermined coefficients. 18 §3.7: Variation of parameters. 19 §3.8: Mechanical and electrical vibrations. 20 §3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform §6.1: Definition of the Laplace transform. 22 §6.2: Solution of initial value problems. §6.3: Step functions. 23 §6.4: Differential equations with discontinuous forcing functions. 24 §6.5: Impulse functions. §6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series §10.A: Derivation of the Heat Conduction Equation. §10.1: Two-point boundary value problems. 27 §10.2: Fourier series. §10.3: The Fourier convergence theorem (briefly). §10.4: Even and odd functions.		11	Chapter 4. Higher Order Linear Equations §4.1: General theory of n^{th} order linear equations.			
\$3.2: Fundamental solutions of linear homogeneous equations. \$3.4: Complex roots of the Wronskian. \$3.4: Complex roots of the characteristic equation. 15 \$3.5: Repeated roots; Reduction of order. 16 \$3.6: Nonhomogeneous equations; Method of undetermined coefficients. 17 \$4.3: The method of undetermined coefficients. 18 \$3.7: Variation of parameters. 19 \$3.8: Mechanical and electrical vibrations. 20 \$3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform \$6.1: Definition of the Laplace transform. 22 \$6.2: Solution of initial value problems. \$6.3: Step functions. 24 \$6.4: Differential equations with discontinuous forcing functions. 25 \$6.5: Impulse functions. \$6.6: The convolution integral. 26 \$10.4: Derivation of the Heat Conduction Equation. \$10.1: Two-point boundary value problems.		12	§4.2: Homogeneous equations with constant coefficients.			
Week 4: July 21-25 Sa.5: Repeated roots; Reduction of order. Sa.6: Nonhomogeneous equations; Method of undetermined coefficients. Sa.7: Variation of parameters. Sa.8: Mechanical and electrical vibrations. Sa.9: Forced Vibrations. Chapter 6. The Laplace Transform		13				
Sa.6: Nonhomogeneous equations; Method of undetermined coefficients.		14				
July 21-25 17 \$4.3: The method of undetermined coefficients. 18 \$3.7: Variation of parameters. 19 \$3.8: Mechanical and electrical vibrations. 20 \$3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform		15	§3.5: Repeated roots; Reduction of order.			
Exam II, July 23, 17:40 Page 45: Aug. 4-8 Week 6: Aug. 11-15 Week 6: Aug. 11-15 Aug. 11-15 Week 6: Aug. 11-15 Aug. 11-15	Week 4:	16	§3.6: Nonhomogeneous equations; Method of undetermined coefficients.			
Same II, July 23, 17:40 20 §3.8: Mechanical and electrical vibrations. 20 §3.9: Forced Vibrations. 21 Chapter 6. The Laplace Transform §6.1: Definition of the Laplace transform. 22 §6.2: Solution of initial value problems. §6.3: Step functions. 23 §6.4: Differential equations with discontinuous forcing functions. 24 §6.5: Impulse functions. §6.6: The convolution integral. 26 §10.A: Derivation of the Heat Conduction Equation. §10.1: Two-point boundary value problems. 27 §10.2: Fourier series. §10.3: The Fourier convergence theorem (briefly). §10.4: Even and odd functions.	July 21-25	17	§4.3: The method of undetermined coefficients.			
July 23, 17:40 20 §3.9: Forced Vibrations. Chapter 6. The Laplace Transform §6.1: Definition of the Laplace transform. 21 §6.2: Solution of initial value problems. §6.3: Step functions. 22 §6.4: Differential equations with discontinuous forcing functions. 23 §6.4: Differential equations with discontinuous forcing functions. 24 §6.5: Impulse functions. §6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series §10.A: Derivation of the Heat Conduction Equation. §10.1: Two-point boundary value problems. 27 §10.2: Fourier series. §10.3: The Fourier convergence theorem (briefly). §10.4: Even and odd functions.		18	§3.7: Variation of parameters.			
Week 5: Aug. 4-8 Week 6: Aug. 11-15 Week 6: Aug. 11-15 Chapter 6. The Laplace Transform §6.1: Definition of the Laplace transform. 22 §6.2: Solution of initial value problems. §6.3: Step functions. 24 §6.4: Differential equations with discontinuous forcing functions. 25 §6.5: Impulse functions. §6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series §10.A: Derivation of the Heat Conduction Equation. §10.1: Two-point boundary value problems. 26 §10.2: Fourier series. §10.3: The Fourier convergence theorem (briefly). §10.4: Even and odd functions.	,	19	§3.8: Mechanical and electrical vibrations.			
Section Sect	July 23, 17:40	20	§3.9: Forced Vibrations.			
Week 5: Aug. 4-8 Aug. 4-8 \$6.4: Differential equations with discontinuous forcing functions. 24 \$6.5: Impulse functions. \$6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series \$10.4: Derivation of the Heat Conduction Equation. \$10.1: Two-point boundary value problems. 27 \$10.2: Fourier series. \$10.3: The Fourier convergence theorem (briefly). \$10.4: Even and odd functions.		21				
\$6.4: Differential equations with discontinuous forcing functions. 24 \$6.5: Impulse functions. \$6.6: The convolution integral. Chapter 10. Partial Differential Equations and Fourier Series \$10.A: Derivation of the Heat Conduction Equation. \$10.1: Two-point boundary value problems. 27 \$10.2: Fourier series. \$10.3: The Fourier convergence theorem (briefly). \$10.4: Even and odd functions.		22				
Week 6: Aug. 11-15 26 Signature Series Signature Si		23	§6.4: Differential equations with discontinuous forcing functions.			
Week 6: 26 \$10.A: Derivation of the Heat Conduction Equation. Aug. 11-15 \$10.1: Two-point boundary value problems. 27 \$10.2: Fourier series. \$10.3: The Fourier convergence theorem (briefly). Final		24				
§10.4: Even and odd functions.		26	§10.A: Derivation of the Heat Conduction Equation.			
Final		27	§10.2: Fourier series. §10.3: The Fourier convergence theorem (briefly).			
	Final		§10.4: Even and odd functions.			
	FIIIAI	29	§10.5: Separation of variables, heat conduction in a rod.
